

SCMS Swab Cycle Monitoring System for the FMT24S

Container glass
production

Get a handy reminder of the next swab cycle

The SCMS monitors the swab cycles and provides visual and acoustic warnings when the next one is due. When an LED timer is connected to the FMT24S, the time until the next swab interval is displayed. You start or reset the counter by activating the special program.

Different job-dependent swab times are stored and managed centrally in the MCT database. The SCMS is shipped with a robust industrial LED display and the necessary FMT24S software upgrade.

A screenshot of a software window titled 'Special program run monitoring'. The window has a light blue header and a white body. It contains several fields and dropdown menus. The 'Special program' field is set to 'FF Schm.'. The 'Monitor what?' dropdown is set to 'Time'. The 'Start monitoring when?' dropdown is set to 'Job on'. The 'Program run intervals [hh:mm]' field is set to '00:27'. The 'Reminder (before interval ends)' field is set to '5'. The 'If interval exceeded' dropdown is set to 'Logbook message'. At the bottom right, there are 'OK' and 'Cancel' buttons.
